

WHI-SK10A

New version of the SK10 is now available.

The WHI-SK10A electronic controller automatically starts and stops a water pump when opening or closing a tap. The controller keeps the pump running, even at low flows for constant pressure.

The WHI-SK10A also protects the water pump from damage by turning it off should the pump run out of water.

AUTO RESTART FEATURE

The controller will automatically restart the pump every 24 hours to look for water. The pump run on time is set at 60 seconds to maximise the pump's ability to reprime where suction may be lost. The restart time of day is set when power is supplied to the controller.

The controller is especially suitable for non-electric Rainsaver systems of the future.

The WHI-SK10A is pre-wired to assist installation.

Construction Characteristics.

Inlet 1" BSP male
Outlet 1" BSP male
Special non-return valve to avoid surges.
Security system to avoid operation of the pump without water.
Manual start switch (RESET)
Voltage Led (POWER)
Pump working LED (ON)
Security system LED (FAILURE)
2.0 metre lead and 3 pin plug.
0.6 metre pump power lead, stripped and terminated.

Technical characteristics

Voltage: 240V
Maximum current: 10 Amps
Maximum kW: 1.1
Frequency: 50 Hz
Ingress protection: IP65
Maximum water temperature: 60 deg C.
Starting pressure 1.5 bar.
Maximum pressure: 10 bar
Minimum flow 1.0 l/m
List price: \$ 152.00 ex GST
